BUREAU OF THE CENSUS

JANUARY 1986

M31A(86)-1
Issued March 1986

The statistics in this publication are based on a sample of known manufacturers of footwear and represent total U.S. production and shipments of nonrubber footwear and production of shoes with soles vulcanized to fabric upper and rubber and/or plastic protective footwear. Estimates are included for companies whose reports were not received in time for tabulation. A description of the survey methodology and related information appears on page 4.

DESCRIPTION OF SURVEY

Scope of Survey. This survey covers all manufacturers of footwear, regardless of material, in the United States.

Survey Methodology. The statistics shown in this publication were collected on Bureau of the Census monthly Form M31A, Footwear, from a sample of approximately 250 establishments accounting for 90 percent of total U.S. output of footwear in 1983. The universe for this survey is the 1984 annual MA31A, Footwear, survey. The monthly sample was selected by arraying the annual survey panel in descending order by size for each product category and then choosing a sufficient number (beginning with the largest) to yield a coverage of approximately 85 percent for each product category. Data for the small establishments included in the annual survey but not selected for the monthly sample, including establishments (generally those with less than five employees), for which 1982 Census of Manufactures data were derived from administrative records of other government agencies, are estimated based on their reported or derived annual level and the month-to-month trends of reporting establishments.

Survey Error. Figures for the current month may include estimates for panel members for which reports were not received in time for tabulation. Such missing figures are "imputed" based on month-to-month movements shown by reporting firms. Imputation generally is limited to a maximum of 25 percent for any one data cell. Figures with imputation rates greater than 25 percent are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The range of difference between the actual and imputed figures is not precisely known, but is assumed to be small. The degree of uncertainty regarding the accuracy of the published data, however, increases as the percentage of imputation increases. Figures with imputation rates above 25 percent should be used with caution.

Revisions to Previous Period Data. Statistics for previous months may be revised as the result of corrected data from respondents, including the receipt of late reports for which imputations were made as described above. Figures which have been revised by more than 5 percent from previously published figures are indicated by footnotes.

Adjustment for Price Change. All dollar figures included in this publication are in current dollars; i.e., they have not been adjusted for price change.

Reporting Period Adjustment. The data are adjusted for the number of working days in the reporting period to compensate for differences in individual company reporting patterns, i.e., calendar month, 4-week, 5-week periods. Since the calendar month accounting system prevails in this industry, adjustments have been made to those reporting on other than a calendar month basis.

EXPLANATION OF TERMS

Production—All footwear made in the United States from materials owned by the reporting company, including footwear made on contract to the Government. Footwear cut in the United States, shipped to a foreign country for sewing, and shipped back to the United States under special import category 807, which is part of Schedule 8 Special Classification Provisons of the Tariff Schedules of the United States, Annotated, is also excluded.

Shipments—Represents quantity and net value (f.o.b. factory price, less discounts, allowances, and returns) of footwear shipped to stores, and warehouses, including those produced by others from materials owned by the reporting companies. Shipments of footwear resold without further manufacture, including sale of imports, are not included if properly reported.

Shoes and Slippers, Except Rubber or Plastic Soled/Fabric Upper and Rubber and Plastic Protective Footwear—Includes all footwear, except rubber or plastic soled/fabric upper shoes such as tennis shoes, running shoes, and espadrilles, and rubber and/or plastic protective footwear. Cemented fabric upper sandals and slippers are classified as sandals and slippers, respectively, regardless of the sole.

Men's Work Shoes—Includes safety shoes with sole ¼ inch or more thick.

Athletic Shoes—Includes skating shoes and shoes with cleats. Excludes sneakers and running shoes with rubber or plastic soles, vulcanized, injection molded, or cemented to fabric uppers.

Other Footwear, Except Those With Sole Vulcanized, Injection Molded or Cemented to Fabric Upper—Includes ballet and other theatrical shoes.

Slippers—Includes foldable and packable slippers.

Sizes

Men's shoes (including big boys' shoes): Includes sizes 6 and over.

Youths' and boys' shoes: Includes sizes 12½ to 5½.

Women's shoes (including growing girls' shoes): Includes sizes 4 and over.

Misses' shoes: Includes sizes 12½ to 3½.

Children's shoes (including little boys'): Includes sizes 8½ to 12.

Infants' shoes: Includes sizes 0 to 8.

Rubber or Plastic Soled/Fabric Upper Footwear—Includes sneakers, espadrilles, and running shoes with rubber or plastic soles vulcanized, injection molded, or cemented to fabric upper. Cemented slippers and sandals and cemented, vulcanized, or injection molded vinyl upper slippers are classified in the above appropriate age/sex category.

COMPARISON OF EXPORT, IMPORT, AND DOMESTIC OUTPUT DATA

The Standard Industrial Classification (SIC) system used for domestic output and the statistical export and import commodity classifications were developed independently. This results in considerable difficulty in comparing the three types of data for many commodity areas. The domestic output classification is based on type of industry; on the other hand, the export and import classification system is more materials oriented. Also, there are a substantial number of imported commodities which have no comparable domestic output classification. The relationships shown in this report should be considered only as approximations, since, in addition to the problems mentioned above, there are also the following problems affecting the comparability of the three sets of data.

Valuation. There are different methods of valuation for the three types of data:

- *Domestic Output.* Valued at the point of production. It includes the net sales price, f.o.b. plant, after discounts and allowances, exclusive of freight charges and excise taxes.

- *Exports.* Valued at the point of exportation. It includes the selling price, or cost if not sold, and inland freight, insurance and other charges to the export point.

  Estimated producers' values of exports have also been developed. These values more closely approximate the values reported for domestic output because they exclude freight, insurance, and other charges applied from the producing plant to the export point.

- *Imports.* Valued at the first port of entry in the United States. It includes c.i.f. (cost, insurance, and freight), duty, and other charges to the import point.

Duplication in Quantity and Value of Output. Because producers' shipments of some commodities may be used as materials for incorporation into other commodities, combinations of data for such commodities may contain a certain amount of duplication. Thus, percentages of exports to output or imports to apparent consumption (output plus imports minus exports) at four-digit or broader levels may be understated. Where duplication is known to be substantial, the output data are appropriately noted in the table.

Low-Value Export and Import Transactions. Detailed commodity information is not included for individual export shipments valued at not more than $1,000. Generally, detailed commodity information is not included for individual import shipments valued at not more than $1,000. For textiles and textile products, gloves, footwear, and miscellaneous rubber and plastics products, detailed commodity information is not included for individual import shipments valued at not more than $250. This is believed to have only negligible effects on the statistics for the bulk of the commodities.

Manufacturers' Shipments, Not Specified by Kind. The value of manufacturers' shipments at the four-digit industry level often includes a small amount which is not distributed among the individual five-digit product classes. Export and import percentages at the more detailed levels might, therefore, be slightly overstated.

Time Lag Between Output and Exports. There will be a lag between the time a commodity is produced or shipped by the producer and the time it is actually exported, especially when intermediaries (wholesalers, exporters, etc.) are involved. Ordinarily, this type of discrepancy is insignificant in annual figures.

"Direct" vs "Total" Commodity Exports and Imports. Export and import data do not include materials which are incorporated into other more finished products and exported or imported in finished form. Thus, by showing only direct exports and imports, the relation of exports to output and imports to apparent consumption for intermediate products is considerably understated.

Used Commodities. With a few exceptions, used or rebuilt commodities are classified in the same import or export codes as is new merchandise. Percentages are thus overstated to the extent that used or rebuilt products are significant in trade.

Geographic Area of Coverage. Import and export data reflect the movement of merchandise into and out of U.S. foreign trade zones, the U.S. Virgin Islands, and the U.S. customs territory (includes the 50 States, the District of Columbia, and Puerto Rico).

RELATED REPORTS

An annual Current Industrial Report MA31A, *Footwear*, also is published in this series. The annual report provides detailed information on footwear production by sex and type of construction and shows revisions in the monthly series for both the current and previous year. It also provides a single reference copy to replace the monthly publication.

The Bureau of the Census publishes the following related reports:

U.S. Department of Commerce
BUREAU OF THE CENSUS

FEBRUARY 1986

M31A(86)-2
Issued April 1986

The statistics in this publication are based on a sample of known manufacturers of footwear and represent total U.S. production and shipments nonrubber footwear and production of shoes with soles vulcanized to fabric upper and rubber and/or plastic protective footwear. Estimates are included for companies whose reports were not received in time for tabulation. A description of the survey methodology and related information may be found in the January 1986 report for this series, M31A(86)-1, issued March 1986.

The statistics in this publication are based on a sample of known manufacturers of footwear and represent total U.S. production and shipments of nonrubber footwear and production of shoes with soles vulcanized to fabric upper and rubber and/or plastic protective footwear. Estimates are included for companies whose reports were not received in time for tabulation. A description of the survey methodology and related information may be found in the January 1986 report for this series, M31A(86)-1, issued March 1986.

U.S. Department of Commerce
BUREAU OF THE CENSUS

OCTOBER 1986

M31A(86)-10
Issued December 1986

The statistics in this publication are based on a sample of known manufacturers of footwear and represent total U.S. production and shipments nonrubber footwear and production of shows with soles vulcanized to fabric upper and rubber and/or plastic protective footwear. Estimates are included for companies whose reports were not received in time for tabulation. A description of the survey methodology and related information may be found in the January 1986 report for this series, M31A(86)-1, issued March 1986.

CURRENT INDUSTRIAL REPORTS

Footwear

DECEMBER 1986

M31A(86)-12
Issued February 1987

U.S. Department of Commerce
BUREAU OF THE CENSUS

The statistics in this publication are based on a sample of known manufacturers of footwear and represent total U.S. production and shipments of nonrubber footwear and production of shoes with soles vulcanized to fabric upper and rubber and/or plastic protective footwear. Estimates are included for companies whose reports were not received in time for tabulation. A description of the survey methodology and related information may be found in the January 1986 report for this series, M31A(86)-1, issued March 1986.
